Assignment Name: Mastery -Printing & Grade

Error Log - Error in Printing, No errors in GradeCalc

What error message did you encounter (if any)?

The error message that i had received was about my math not working

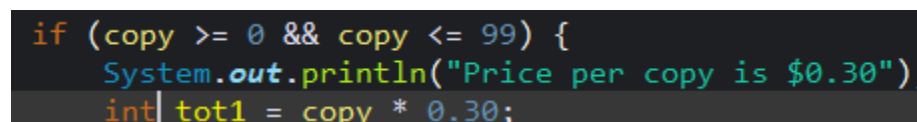

What unexpected behavior did your program exhibit?

It showed a red line under copy*.30

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

Incorrect type

Include a screenshot of specific lines of code.

A screenshot of a code editor with a dark background. It shows three lines of Java code. The first line is an if statement: `if (copy >= 0 && copy <= 99) {`. The second line is an indented print statement: `System.out.println("Price per copy is $0.30")`. The third line is an indented variable declaration: `int tot1 = copy * 0.30;`. A red vertical line is drawn under the `0.30` in the third line, indicating a type mismatch error between the `int` variable and the decimal value.

```
if (copy >= 0 && copy <= 99) {  
    System.out.println("Price per copy is $0.30")  
    int tot1 = copy * 0.30;
```

How did you fix the issue?

I accidentally used int instead of double, because i was multiplying with a decimal.

Provide the corrected code or solution using a screenshot.

```
if (copy >= 0 && copy <= 99) {  
    System.out.println("Price per copy is $0.30");  
    double tot1 = copy * 0.30;  
}
```
