Error Log - Error in GCD, No errors in digit sum

What error message did you encounter (if any)?

I didn't receive any message, but the output was wrong.

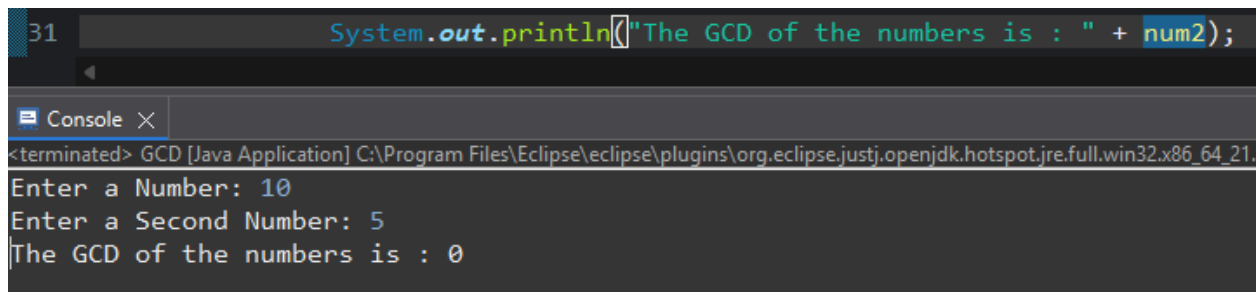

What unexpected behavior did your program exhibit?

Wrong output

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

Incorrect Variable usage.

Include a screenshot of specific lines of code.

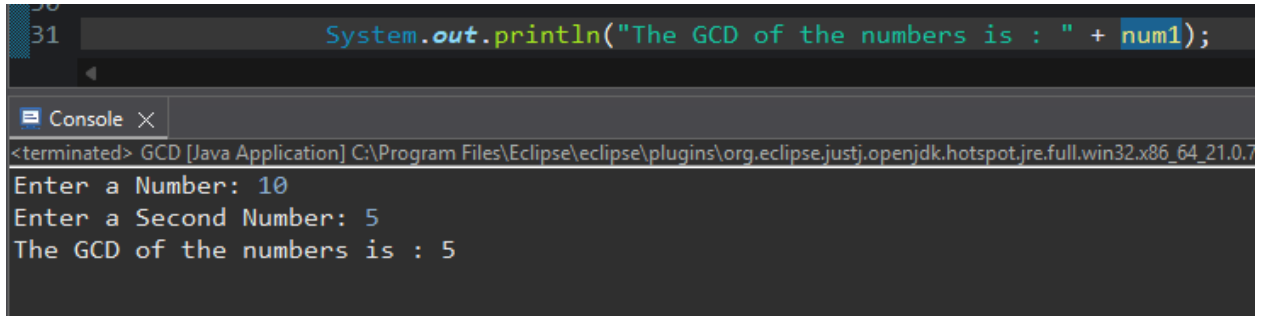

The screenshot shows the Eclipse IDE. At the top, a code editor displays line 31: `System.out.println("The GCD of the numbers is : " + num2);`. Below the editor, the 'Console' window is open, showing the program's execution. It starts with a terminated status, followed by prompts for two numbers: 'Enter a Number: 10' and 'Enter a Second Number: 5'. The final output line is 'The GCD of the numbers is : 0', which is incorrect for the input values 10 and 5.

How did you fix the issue?

I played around with the variables and put num1 instead of num2 which fixed my error.

Provide the corrected code or solution using a screenshot.

The screenshot shows a Java code editor with the following line of code on line 31:

```
System.out.println("The GCD of the numbers is : " + num1);
```

Below the code editor is a console window titled "Console". The console output shows the execution of the program:

```
<terminated> GCD [Java Application] C:\Program Files\Eclipse\eclipse\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.x86_64_21.0.7
Enter a Number: 10
Enter a Second Number: 5
The GCD of the numbers is : 5
```
