

Credit Name: CS20

Assignment Name: Mastery -Printing & Grade

Reflection Log

How did you approach understanding the challenge?

For this challenge, I approached it with the past knowledge of If and Else and the average calculator.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I was confused on if i should use the Case system or the if else,and after looking through the book, i decided to use if and else

Planning Solution

Did you create a plan or break the problem into smaller steps before coding?

For the gradecalc, I broke it into 2 parts, where the first part was about calculating the grade and the second part of showing their average in lettering and showing a message.

How did you decide on the tools, data structures, or algorithms to use?

I decided on using the If else structure, because I was confused on what I should do (case and if else) and after using the textbook to research I found I should use the if else structure.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

I was confused on if i should use the Case system or the if else, and after looking through the book, i decided to use if and else

Planning Solution

Did you create a plan or break the problem into smaller steps before coding?

For the gradecalc, I broke it into 2 parts, where the first part was about calculating the grade and the second part of showing their average in lettering and showing a message.

How did you decide on the tools, data structures, or algorithms to use?

I decided on using the If else structure, because I was confused on what I should do (case and if else) and after using the textbook to research I found I should use the if else structure.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

I attempted to write the code all at once, which is my way of writing code. I also test along the way as it helps me identify problems if any.

How did you test your solution along the way to make sure it was working?

I tested my solution along the way by creating a section of code and running it, and editing it to my preferences.

Overcoming Challenges

What part of the problem was the most difficult for you?

The most challenging part of the project was deciding whether to use Case or If and else structure.

How did you handle moments when you felt stuck or unsure of what to do Next?

When I felt stuck, I referred back to my old code or the textbook for help. If needed I could also go to W3 schools, which I did not require .

Learning

Was there anything you learned that you think will help you with future Challenges?

I learned that to use a range of numbers, I must use the if-else system, rather than a case which is mainly for single numbers.
